

CLAIMS

1. (Currently amended) A method for directing an automatic communication to a recipient, said method including the steps of:

providing a data store;

storing data relating to the recipient in the data store;

examining the data stored and determining that a communication is to be provided to the recipient;

extracting data relating to the recipient from the data store in response to a determination that a communication is to be provided to the recipient;

automatically composing an initial communication in response to the data stored in the data store;

reviewing the initial communication and optionally passing the initial communication to be modified to become a final communication in response to the extracted stored data; and

sending the final communication to the recipient. ;and

~~— wherein said step of passing the initial communication to be modified to become a final communication is optional and selectable in response to the extracted stored data.~~

2. (Original) A method, according to claim 1, wherein the step of modifying the initial communication comprises modifying the initial communication in a manner selected in response to the data extracted from the data store.

3.(Original) A method, according to claim 1, wherein said step of modifying the initial communication comprises at least one of: deleting material from the initial communication; adding new material to the initial communication; providing material of predetermined fixed content and adding the material of predetermined fixed content to the initial communication; providing material of predetermined alterable content and

adding the material of predetermined alterable content to the initial communication; and altering material already provided in the initial communication.

4. (Original) A method, according to claim 1, comprising the steps of: providing access to a plurality of selectable media for providing the final communication to the individual; selecting, in response to the data extracted from the data store , at least one medium of said plurality of selectable media for providing the final communication to the individual; and employing said at least one medium to send the final communication.
5. (Currently amended) A method, according to claim [5] 4, wherein said plurality of selectable media comprises facsimile transmission; telephonic text messaging; data transmission; Internet Communication; and mailing of printed letters.
6. (Original) A method, according to claim 2, comprising the steps of: providing access to a plurality of selectable media for providing the final communication to the individual; selecting, in response to the data stored, at least one medium of said plurality of selectable media for providing the final communication to the individual; and employing said at least one medium to send the final communication.
7. (Original) A method, according to claim 6, wherein said plurality of selectable media comprises facsimile transmission; telephonic text messaging; data transmission; Internet Communication; and mailing of printed letters.
8. (Original) A method, according to claim 1, wherein said step of storing data relating to the recipient in a data store comprises the step of providing access to and accepting data relating to the recipient from at least one of: the Internet; a digital data transmission medium; telephonic text messages; telephonic voice messages; printed matter; data files; and record data files.
9. (Original) A method, according to claim 1 wherein said step of automatically

composing an initial communication in response to the data stored in the data store comprises the step of providing composition text in a plurality of languages, selecting one of said languages in response to the data stored relating to the recipient and composing the initial communication in the language selected.

10. (Original) A method, according to claim 9, wherein said step of modifying the initial communication comprises modifying the initial communication in a same language as a language selected for said initial communication.

11. (Original) A method, according to claim 1, wherein said step of automatically composing an initial communication in response to the data stored in the data store includes the step of providing a plurality of idioms for the initial communication and selecting one of said plurality of idioms for the initial communication in response to data relating to the recipient extracted from the store.

12. (Original) A method, according to claim 11, wherein said step of modifying the initial communication comprises modifying the initial communication in a same idiom as an idiom selected for said initial communication.

13. (Original) A method, according to any one of claims 1-12, wherein said step of automatically composing an initial communication in response to the data stored in the data store includes the step of providing a plurality of forms of composition suitable for use in respective individual jurisdictions; and selecting a particular jurisdiction with the respective form of composition in response to the data relating to the recipient extracted from the store; and, composing the communication in the respective form of composition.

14. (Original) A method, according to claim 13, wherein said step of modifying the initial communication comprises modifying the initial communication with material suitable for use in a same jurisdiction as the initial communication.

15. (Previously presented) A system for directing an automatic communication to a recipient, said system comprising: a data store for storing data relating to the recipient; examination means for examining the data stored in the data store and determining that a communication is to be provided to the recipient; data extraction means for extracting data relating to the recipient from said data store in response to a determination by said examination means that a communication is to be provided to the recipient; initial communication composition means for composing an initial communication in response to the data stored; modification means for modifying the initial communication to become a final communication; and message transmission means for sending the final communication to the recipient, wherein said modification means is optionally selectively operable in response to the data extracted from the data store.

16.(Canceled) A system, according to claim 15, wherein said modification means is selectively operable in response to the data extracted from the data store.

17. (Previously presented) A system, according to claim 15 , wherein said modification means is operable to change only a predetermined portion of the initial communication.

18. (Original) A system according to claim 15, wherein said modification means is operable in response to the data extracted from said data store to modify the initial communication in a selected manner.

19. (Original) A system, according to claim 15, wherein said modification means is operable to perform at least one of: doing nothing to the initial communication; deleting material from the initial communication; adding new material to the initial communication; adding material of predetermined fixed content to the initial communication; adding material of predetermined alterable content to the initial communication; and altering material already provided in the initial communication.

20. (Original) A system, according to any claim 15, wherein said initial communication

composition means is operable, in response to the data extracted from said data store, to select at least one medium from among a plurality of selectable media for providing the communication to the individual and to compose the communication in a form suitable for use on said at least one medium selected; and wherein said message transmission means is operable to employ said at least one media selected to send the final communication.

21. (Original) A system, according to claim 20, wherein said plurality of media includes: facsimile transmission; telephonic text messaging; data transmission; Internet Communication; and mailing of printed letters.

22. (Original) A system, according to claim 15, wherein said data relating to the recipient includes data from at least one of: the Internet; a digital data transmission medium; telephonic text messages; telephonic voice messages; printed matter; data files; and record data files.

23. (Previously presented) A system, according to claim 15, wherein said initial communication composition means is operable to compose the initial communication in a selectable one of a plurality of languages, the one of the plurality of languages being selected in response to the data relating to the recipient extracted from said data store.

24. (Original) A system, according to claim 23, wherein said modification means is operable to modify the initial communication in a same language as a language selected for said initial communication.

25. (Previously presented) A system, according to claim 15, wherein said initial communication composition means is operable to select one of a plurality of idioms for the initial communication, the particular idiom being selected in response to the data relating to the recipient extracted from said data store.

26. (Original) A system, according to claim 25, wherein said modification means is operable to modify the initial communication in a same idiom as an idiom selected for said initial communication.

27. (Original) A system, according to any one of claims 15 to 26, wherein said initial communication composition means is operable to compose the initial communication in a form suitable for use in a selectable one of a plurality of jurisdictions, the particular one of the plurality of jurisdictions being selected in response to the data relating to the recipient extracted from the data store.

28. (Original) A system, according to claim 27, wherein said modification means is operable to modify the initial communication with material in a same form as the form suitable for use in the same jurisdiction as the jurisdiction selected for the initial communication.

29. (Cancelled) A system for directing an automatic communication to a recipient, said system comprising:

a data store for storing data relating to the recipient received from at least one of: the Internet; a digital data transmission medium; telephonic text messages; telephonic voice messages; printed matter; other data files;

record data files examination means for examining the data stored in the data store and determining that a communication is to be provided to the recipient;

data extraction means for extracting data relating to the recipient from said data store in response to a determination by said examination means that a communication is to be provided to the recipient;

initial communication composition means for selecting one of a plurality of languages, selecting one of a plurality of idioms and selecting one of a plurality of forms of composition for a respective one of a plurality of jurisdictions and, automatically composing the initial communication in the language selected, the idiom selected and the form of composition selected in response to the data relating to the recipient

extracted from the data store; said initial communication composition means being operable, in response to the data extracted from said data store, to select at least one medium from among a plurality of selectable media for providing the communication to the individual, said plurality of selectable media including facsimile transmission; telephonic text messaging; data transmission; Internet Communication; and mailing of printed letters and to compose the communication in a form suitable for use on said at least one medium selected;

modification means selectively operable in response to the data stored from said data store for modifying the initial communication to become a final communication; and,

message transmission means operable to employ said at least one media selected to send the final communication to the recipient.

30. (Cancelled) A system according to claim 29 wherein said modification means is operable to modify the initial communication in at least one of a same language as a language selected for said initial communication, a same idiom as an idiom selected for said initial communication; and, a same form of composition as a form of composition selected for said initial communication.

31. (Cancelled) A method for directing an automatic communication to a recipient, said method including the steps of:

providing a data store;

storing data relating to the recipient in the data store;

examining the data stored and determining that a communication is to be provided to the recipient;

extracting data relating to the recipient from the data store in response to a determination that a communication is to be provided to the recipient;

providing composition text in a plurality of languages, idioms and forms of composition suitable for respective different jurisdictions;

selecting one of said languages, one of said idioms and one of said forms of

composition and, automatically composing the initial communication in the language selected, the idiom selected and the form of composition selected in response to the data stored from the data store relating to the recipient;

reviewing the initial communication and determining that the initial communication is to be modified to become a final communication in response to the data extracted from the data store relating to the recipient ;

modifying the initial communication in response to a determination that the initial communication is to be modified to become a final communication;

providing access to a plurality of selectable media for providing the final communication to the individual comprising facsimile transmission; telephonic text messaging; data transmission; Internet Communication; and mailing of printed letters;

selecting, in response to the data stored, at least one medium of said plurality of selectable media for providing the final communication to the individual;

and employing said at least one medium to send the final communication to the recipient.

32. (Cancelled) A method according to claim 31 wherein said step of modifying the initial communication comprises modifying the initial communication in at least one of a same language as a language selected for said initial communication, a same idiom as an idiom selected for said initial communication; and, a same form of composition as a form of composition selected for said initial communication.

33. (Previously presented) A method for directing an automatic communication to a recipient, said method including the steps of:

providing a data store;

storing data relating to the recipient in the data store;

examining the data stored and determining that a communication is to be provided to the recipient;

extracting data relating to the recipient from the data store in response to a

determination that a communication is to be provided to the recipient;
automatically composing an initial communication with a modifiable portion and
an unmodifiable portion in response to the data stored from the data store;
passing the modifiable portion of the initial communication to become a final
communication and sending the final communication to the recipient;
wherein said step of passing the modifiable portion of the initial communication
to be modified to become a final communication is optional and selectable
_____ in response to the data relating to the recipient extracted from the data store.

34. (Previously presented) A method for directing an automatic communication to a
recipient, said method including the steps of: storing data, relating to the recipient, in a
data store; examining the stored data to determine if a communication is to be provided
to the recipient; if a communication is to be provided to the recipient, extracting the
stored data relating to the recipient from the data store; automatically composing an
initial communication in response to the stored data; passing the initial communication
to be modified to become a final communication; sending the final communication to
the recipient, and wherein said step of passing the initial communication to be modified
to become a final communication is optional and selectable in response to the extracted
stored data.

35.(Previously presented) A system for directing an automatic communication to a
recipient, said system comprising: a data store for storing data relating to the recipient;
examination means, operable to examine the stored data extraction means, operable, if
said examination means determined that a communication is to be provided to the
recipient, to extract the stored data relating to the recipient from said data store; initial
communication composition means, operable to compose an initial communication in
response to the stored data; modification means, operable to modify the initial
communication to become a final communication; message transmission means,
operable to send the final communication to the recipient, and wherein said modification
means is optionally selectively operable in response to the extracted stored data.
